

# Reasons to Invest in ENVI

---

- ✓ Markets for products that improve air quality are global
- ✓ Key product component is protected by patent
- ✓ Approach to pollutant removal is:
  - Unique – Complete interaction between the polluted stream and the scrubbing fluid through the patented scrubbing head.
  - Adaptable – System allows for variations to remove solids and gases that are risks the health, quality of life and climate change.
  - Scaleable – ENVI-clean™ System can be scaled to clean commercial and large scale industrial waste streams.
- ✓ Product has applications in multiple industrial markets:
  - To remove particulate matter
  - To remove Sulphur Dioxide and other oxides influencing global warming
  - To remove odor causing gaseous compounds
  - To remove chemical elements and compounds
- ✓ Company is in the transition from product development at its Research Facility to conducting field tests with companies that intend to purchase the ENVI-clean™ Scrubbing System for diesel exhaust applications.
